

# OUR PRACTICE

---

## Medical Devices and Health Care Information Technology

Baker Donelson's patent attorneys have helped numerous clients take their medical, diagnostic and surgical inventions from ideas to reality. We understand the unique challenges in all phases of the product development cycle, from recognition of a medical problem to be solved, to development of biocompatible prototypes and optimization of features for mass production. We represent inventors, entrepreneurs, manufacturers, venture capital investors and many other interests that often impact the prospects for commercial success in the medical device field. Our attorneys are skilled in drafting, filing and prosecuting medical device patent applications across a wide range of medical and life science technologies.
